

Course Outcomes

Political Science

- After completion of the course, the students understand the nature, scope, meaning and significance Political Science.
- The students will have knowledge about various theories explaining the Indian and international politics.
- The students of Political Science will be well aware about of the meaning, sources and Schools of Law.

Education

- The study of education at college level will help the students to demonstrate an understanding of the concepts, theories, nature, scopes, principles and procedure of the selected areas Education.
- The students will develop skills in analyzing different statistical measures, interpreting test results and interpretation of data through graph and statistic technique.
- Completion of the course will enable students to develop a positive self-concept, self-confidence and an optimistic attitude towards life

Chemistry

- The completion of this course will help the students in understanding of major concepts in all disciplines of chemistry.
- Students will employ critical thinking and the scientific method to design, carry out, record and analyze the results of chemical experiments and get an awareness of the

impact of chemistry on the environment, society, and other cultures outside the scientific community.

- The students will be able to explain chemical nomenclature, structure, reactivity, and function in their specific field of chemistry.
- The design and execution of the experiment should demonstrate an understanding of good laboratory and the proper handling of chemical waste streams and also explain how the applications of Chemistry relates to the real world.

Kashmiri

- The study of this course will make students knowledgeable about the history and development of Kashmiri literature as well as Kashmiri history and culture. They will develop an ability to read texts in relation to their historical and cultural contexts, in order to gain a richer understanding of both text and context, and to become more aware of themselves as situated historically and culturally.
- Students will develop a passion for literature and language. They will appreciate literature's ability to elicit feeling, cultivate the imagination, and call us to account as humans.
- Students will have a critical mind while reading literary text, and deploy ideas from these texts in their own reading and writing.

Geography

- After the completion of the course, students will be able to identify and explain the geographical environment, from global to local scales.

- The study of geography as a subject will enable students to apply geographical knowledge to everyday living.
- The students will be able to evaluate the impacts of human activities on natural environments special reference to India.

Psychology

- The study of Psychology at college level will help the students to outline the development of human beings at every stage of life.
- The students will be able to analyze social influence, social perception and social interaction and the influence individual behavior in a society.
- The students will demonstrate the various counseling techniques and apply them in various life situations/circumstances.
- The students will understand human and animal behavior and the different perspectives in psychology.

Sociology

- The study of sociology helps students to develop a critical understanding of social structures and processes, and make them able to live and work in diverse global society and to apply the tools of social analysis to a broad range of professional, academic and community situations.
- The understanding of methods developed by sociologists make students aware about the complexity of human organization, social life, inequalities and social justice.

- The newly emerging patterns of social change continue to alter our life, making the effective applications of social analysis more important than ever before in solving problems of inequalities, human organization and justice at a local and global level.

Botany

- The students will get an idea about the range of plant diversity in terms of structure, function and environmental relationships.
- The students will be able to understand plant classification and the flora with emphasis on local level.
- On completion of the course, the students will think logically and organize tasks into a structured form.
- Students can learn to carry out practical work, in the field and in the laboratory, with minimal risk.

Business Administration

- The completion of the course will make students able to understand, analyze and apply management concepts in the areas related to marketing, human resources and finance for efficient running of the business organisation of varying complexity.
- Students will develop as effective management professionals and take on more responsibilities in future and to give outstanding results in the area of their interest.

Urdu

- The students of this course will get knowledge about the history and development of Urdu literature. They will be able to read texts in relation to their historical and cultural contexts.
- Students will develop a passion for literature and language. They will appreciate literature's ability to elicit feeling, cultivate the imagination, and call us to account as humans.
- Students will have a critical mind while reading literary text, and deploy ideas from these texts in their own reading and writing.

Economics

- The completion of a degree in economics provides the students a solid foundation for a career in business, government, or with a nonprofit organization. By studying this subject, the students will understand how societies, governments, businesses, households, and individuals create, use, manage and distribute resources.
- The students with economics background will be able to understand public policies like health care and education reform.
- The study of economics will equip the students with the skills to make better decisions in a business environment, on public policy, and even in their personal choices.

Environmental Sciences

- The students will be able to obtain good information about environment science, its resources and management.
- After completion of this course, students would be able to analyze the ways in which the natural environments impact the society.

- The students would also gain knowledge about the ways and means of managing the natural resources for the benefit of the society.

Computer Application

- The completion of this course will help the students to establish themselves as effective professionals by solving real problems through the use of computer knowledge effective communication, critical thinking and problem solving skills.
- Students will develop professional skills that prepare them for immediate employment and for life-long learning in advanced areas of computer science and related fields.

Physics

- The study of physics inculcates the ability in students to relate theories of science with natural phenomena.
- Various theories of science including those of physics were experimentally tested numerous times and found to be an adequate approximation of nature.
- Physics uses mathematics to organize and formulate experimental results. From those results, precise or estimated solutions, quantitative results from which new predictions can be made and experimentally confirmed or negated.
- The results from physics experiments are numerical measurements. Technologies based on mathematics, like computations have made computational physics an active area of research.

English Literature

- The completion of course will help the students in developing intellectual, personal and professional abilities through effective communicative skills; ensuring high standard of behavioral attitude through literary subjects and shaping the students socially responsible citizens.
- The students will be accurate both in oral and written communication as they will be strong in Grammar and its usage.
- The students can express a thorough command of English and its linguistic structures.
- The students will get acquainted with the conventions of diverse genres in literature including fiction, non-fiction, poetry, autobiography, biography etc.

Mathematics

- The students who study mathematics will be able to apply critical thinking skills to solve problems that can be modeled mathematically.
- They will also critically interpret numerical and graphical data, to read and construct mathematical arguments and proofs, to apply mathematical knowledge to a career related to mathematical sciences.

English

- The students are introduced to communicative skills, to define, classify, and understand the methods of communication and to enable them to practice those skills in their daily life by identifying instances of communication in the circumstances of their own.
- The students can comprehend literary texts of ancient and modern literature written by great writers of English.

- On completion of the course, the students will acquire good knowledge with regard to the analysis of critical frameworks and methodologies for better interpretation of literature.

Commerce

- The students of this course on its completion will be well trained professionals for the Industries, Banking Sectors, Insurance Companies, Financing companies, Transport Agencies, Warehousing etc., to meet the well trained manpower requirements.
- The students will possess the knowledge, skills and attitudes at the end of the course. By virtue of the training they can become Manager, Accountant, Management Accountant, cost Accountant, Bank Manager, Auditor, Company Secretary, Teacher, Professor, Stock Agents etc.

Zoology

- The students will be able to know about animal kingdom including different phyla.
- They will get the detailed knowledge about bio-diversity and conservation of wildlife.
- The students will be able to understand the causes of bacterial, viral and venereal diseases and their control.
- On completion of the course, the students will know about the fish culture with respect to their life cycle.

History

- The students on completion of the course will be able to acquire basic historical research skills, including the effective use of libraries, archives and databases.

- Students will be able to organise and express their thoughts clearly and coherently both in writing and orally.
- Students will be able to demonstrate broad knowledge of historical events and periods and their significance.
- Students will be able to recognise how different individuals, groups, organisations, societies, cultures, countries and nations have affected history. History gave the students, wisdom and foresight for the future.
